

The Intranets.com Worldwide Data Center provides your company with the reliability, scalability and security it needs to host your Intranets.com service.

Features and Capabilities to Ensure Operational Excellence

- Superior performance, providing redundant high-bandwidth connectivity so your data is always available.
- Nightly back-ups stored offsite to prevent data loss.
- Scalability, enabling you to deploy your Intranets.com service throughout your organization.
- State-of-the-art security measures, including multiple levels of access control to prevent unauthorized access.
- Intelligent traffic load balancing among multiple servers to ensure maximum availability of your Intranets.com service.
- 24x7 monitoring and support of network connection and server availability to minimize downtime.
- One-hop from the internet backbone ensures fast and reliable connections.

Physical Features to Protect Your Data

- Fire detection and fire suppression systems with dry pipe pre-action sprinkler systems.
- N + 1 redundant power supply provides dual power feeds and backup batteries, water coolant systems, and generators.
- N + 1 redundant climate control provides primary and backup chiller units, cooling towers, and water storage.
- Local network operations center (NOC) monitors data center's operations.

Security Features to Prevent Unauthorized Access

- 24x7 uniformed guard service with interior and exterior closed-circuit television surveillance.
- Electronic access at all data center entrances, including biometric hand scanners
- Electronic key management systems and individually keyed cabinets
- Download our [Security Whitepaper](#) for more security practices

What's the bottom line for your business?
